Connector system Wieland
Device cup, pre-converted
Assembly instructions
Connector system Wieland | Device cup, pre-converted
Assembly instructions

1 | Pre-converted device cups
Delivery of device cups: fully pre-mounted with sockets and pre-wired on connector plugs.

2 | Device mounting cup
Place the pre-converted device cup into the lock-in leads of the installation units as deep as possible.

3 | Connecting lines
Select cables according to colour (black: general net, white: data processing net) and length. Insert the socket component of the 3-pole connecting line onto the snap-in piece in the device cup.

4 | Installation unit
Place the complete installation unit with the device cups from the top into the existing floor opening and fixate in the floor with claws.

5 | Plug connector
Self-locking and coded plug connectors facilitate faultless mounting with the device cup. To release, unlatch the spring catch with a turn screw.

6 | Underfloor distributor
Insert the plug of the 3-pole connecting line in one of the six output sockets of the distributor and complete with 5-pole input.

Pre-converted device cup, complete with snap-in plug component and pre-wired sockets. Including all covers and mounting material. For latching into a round or quadrangular installation unit. For up to four heavy current engineering installation devices. For the installation of 3-pole connecting lines with plug connector and socket component.
