Hollow space floor box, quadrangular for screed-covered underfloor duct
Assembly instruction
**Hollow space floor box, quadrangular for screed-covered systems**

**Assembly instruction**

1 | **Hollow space floor box**
Align floor box dead centre to the duct course. Fasten on the raw ceiling and screw the earthing lug tight. Bend open side walls at the perforation. Set one floor box per change of direction into the duct system.

2 | **Duct**
Cut duct, lay up and align. Burr and galvanize cutting edges. Fasten with two nail plugs through the holes in the duct’s side notch. Push duct to dead stop into the box.

3 | **Clip**
Align duct segments flush and push together. Use one clip per duct joint. Fasten overlapping with two nail plugs. Factor in potential equalization when inserting plugs.

4 | **Inserting the shuttering unit**
Insert shuttering unit straight from the top into the floor box opening. Floor box and shuttering unit make one mounting unit. Mask all openings in the duct system. Apply insulation flush to duct system and to shuttering unit.

5 | **Screed work / Subsonic noise insulation**
The shuttering unit must be sprayed with formwork oil. The underfloor system must be insulated against subsonic noise. Mask the shuttering unit with foil. Foil thickness must be < 2 mm. Apply screed neatly to the shuttering unit.

6 | **Removal of shuttering unit**
Remove shuttering unit with the release cord from the hardened screed. Process floor cover to the cleaned installation opening (261 x 261 mm, 261 x 186 mm).
Hollow space floor box, quadrangular for screed-covered systems
Assembly instruction

Using the hollow space floor box UBDHB350
When using the hollow space floor box UBDHB350, the screed-covered duct maximal can be inserted with a maximum angle of 55° without affecting the function. Cutting positions must be deburred and galvanised with cold zinc.

Using the hollow space floor box UBDHB250
When using the hollow space floor box UBDHB250, the screed-covered duct maximal can be inserted with a maximum angle of 51° without affecting the function. Cutting positions must be deburred and galvanised with cold zinc.
