Cartridge units made of stainless steel, round
Assembly instruction
Round cartridge unit with hem made of stainless steel with an external diameter of 307 mm as a dummy cartridge unit, cable outlet cartridge unit and tube cartridge unit for the installation into screed and hollow floors. For 12/30 mm parquet and stone covers and linoleum in combination with rigid foam lid insert. Can be levelled from 100 to 155 mm.

1 | Levelling unit with frame
For parquet or stone floors insert the levelling device into the floor opening. Fasten the four levelling bases with nail plugs.

2 | Rubber seal
The cartridge is equipped with two rubber seals therefore there is no need for inserting them separately. The rubber seal inserted from the bottom guarantees the required subsonic noise, while the rubber seal on the side provides the needed seal. A regular maintenance and cleaning of the seals is necessary.

3 | Lock-in leads
In the first step, loosely attach the both lock-in leads to the frame with two screws each and tighten them firmly after inserting the device holders. Establish the grounding connection between the levelling device and the floor box.

4 | Floor adjustment
Align the installation frame flush on the level of the finished floor above the four levelling screws. Seal expansion joint revolving with cork or sealing mass. When using a coupler plug H = 35 mm observe the minimum installation depth Hmin = 100 mm.

5 | Parquet cover
For damp-maintenance floors, such as parquet covers, use a dummy cartridge unit or a cable outlet cartridge unit. However the floor cover depth must be considered. Insert the replaceable cartridge into the frame. Observe the potential equalization.

6 | Stone cover
For wet maintenance floor covers, such as stone covers, only a tube cartridge unit may be used. However the floor cover depth must be considered. Insert the replaceable cartridge into the frame. The tube can be screwed. Observe the potential equalization.
